KOOLSPAN

Keeping your enterprise instant communications and data completely safe from hackers

TRUSTCALL

Secure Enterprise Instant Communications

- Seamless integration into corporate systems (LDAP – Active Directory)
- Dedicated Admin Console for user licensing and rules management

1 End-to-end encrypted messages and files
FIPS 140-2

FIPS VALIDATED 140-2

2 Desktop and mobile applications

3 Individual, group, and conference calls - audio and video

4 Direct messaging and easily configurable group chat

5 Private push notifications, non-dependent on internet-based applications

6 Full control over service metadata

KoolSpan TrustCall shields voice calls, instant messages, video calls, conference calls, and file transfers, creating a secure environment impervious to prying eyes.

Imagine it like this: an airtight "dome" around your communications without external internet access.

TrustCall protects your data from the **global threat** of cyberattacks

Defense-grade secure communication platform: Specifically designed for Military, Government and Enterprise Verticals.

Superior end-to-end encryption based on KoolSpan's patented keying mechanism

Internet-disconnected private infrastructure: Zero-Trust Architecture, operating in fully enclosed environments.

Compatible with any **device** and **MDM Platform**

Security on three levels: physical, behavioral and end-to-end encryption.

The only solution designed for internet-disconnected environments. Zero dependency on 3rd-party services (cloud, storage, notifications)

Unlike the big tech companies you know, KoolSpan does not collect or use your enterprise's data or metadata. Ownership and administration remain under your control.

TrustCall runs reliably on multiple operating systems and infrastructures, whether you're on premise or in the cloud.

TrustCall eliminates the need for default device notifications that might leak metadata.

FIPS 140-2-certified end-to-end encryption ensure your data is entirely secure, whether it's on a device or in transit.
